

TEST TECHNIQUES FOR  
BOSCH SERVICE STATIONS

Workshop: EL  
06.1993

Electrical/  
electronic systems

The following list indicates the test techniques suitable for system checking (e. g. Motronic, ABS).

The necessary accessories, such as system connector and adapter leads, are indicated in the respective tester list or in the SIS trouble-shooting instructions section headed "TESTERS AND TOOLS".

The list gives a quick outline of which test technique (including older ones) can be employed for the respective system test.

Attention is to be paid as regards exhaust-gas analyzers to the local version/device requirements.

The list of systems/test techniques represents the status as at the time of going to print.
